General and Revenue Depto

Sir

In reply to G. O. no 9591-92 Rd 34-96 dated 9th April last and subsequent docket no 11470-1 Rd 3809 dated 28th Ultimo, calling for a detailed report with available statistics as to the area of paddy cultivation in the District, I have the honor to submit the accompanying statement shewing the area under wet cultivation from 1882-83 (since which period there have been no territorial changes in the District as a whole) upto 1895-96, both years inclusive, from which it will be observed that in every Taluk wet cultivation has gradually and considerably increased.

2. The Amildars, to whom detailed instructions had been issued on the subject, state that wet cultivation has nowhere diminished owing to the clearances for coffee or other

cultivation

cultivation and that, on the contrary, it has augmented from year to year as is borne out by the Talukwar statistics which, at a glance will show that an area of nearly 16,500 additional acres has been brought under cultivation since 1882-83.

3. The reports received from Amildars are herewith forwarded in original with Farlist for reference.

I have the honor to be

Dated 25th Feb 97

Order:-

* Please see P. no 20 also Elliot's letter.

It has been brought to the notice of Govt that owing to the failure of the rains on account of the shrinkage and denudation of the ravines of the head waters of streams the paddy cultivation in the valleys below has been materially affected and reduced. The Dy Commrs of Hassan and Kadur Districts are therefore requested to furnish detailed reports with the available Statistics regarding the area of such cultivation during the last ten or fifteen, or even twenty years. They should, if possible, state whether any clearance for coffee or other cultivation

cultivation in the vicinity may be directly connected with the fluctuation for the worse, of the Paddy cultivation in any Selected tract.

To

The Secretary to the Government of Mysore
General and Revenue Department
Bangalore.

Sir,

Having in Government Proceedings dated 27th April last, sanctioned the admission of the annexed statistics regarding the area of, and duty chargeable on the various descriptions of lands in the Taluq of Arsikere, I have the honor to state that it will be seen from the annexed statement that the total of lands under cultivation during the last 5 years in the several Circles of the Taluq has been a considerable increase in the area under cultivation during that years, notwithstanding that 2 tanks have been breached under Copies and Cardamum cultivation one partly cultivation in the Taluq also has increased from these Steams and rejected also on account of, of which the want is never complained. On the other hand Circles are generally encumbered with fields in the Taluq for attaining of the Sykes fields mostly of Cardamum. Therein, I submit a copy of the Taluq Register obtained from the Amildars, and this clearly shows that at Kaggere two miles from Arsikere there has not been any cultivation in Taluq for the last 30 years.

2. In the Malnad Circles also there has been increase in the cultivation under Cardamum &

by riverbailiff, rise in the Manual. If
any surplus, be equally annexed thereto as
Manual after the said Ordinance
-tization has not sufficiently appeared there
fore in the Manual. If a deficiency
fore that so be also not there except
under State, the number pleasure
shall then be annually printed. —

GOVERNMENT OF MYSORE

REVENUE

PROCEEDINGS

Dated 12*th February* 1898

No. 631-2★
R. F. 34-96

Recording reports received from the Deputy Commissioners of Hassan and Kadur, regarding the area of paddy cultivation in the valleys below the head waters of springs, &c.

M.G.C.P.B.—21-4-98—250

12

READ :—

Government Proceedings No. 9591-2—R. F. 34-96, dated 29th April 1897.

It has been brought to the notice of Government that owing to the failure of streams on account of the opening out and denudation of ravines near the head waters of springs, &c., the paddy cultivation in the valleys below has been materially affected and reduced. The Deputy Commissioners of Hassan and Kadur districts are therefore requested to furnish detailed reports with the available statistics regarding the area of such cultivation during the last ten or fifteen, or even twenty years. They should, if possible, state whether any clearance for coffee or other cultivation in the vicinity may be directly connected with the fluctuation for the worse, of the paddy cultivation in any selected tract.

ALSO :—

The following replies from—

(1) The Deputy Commissioner, Hassan district, No. 494, dated 11th November 1897.

Adverting to Government Proceedings No. 9591-92—R. F. 34-96, dated 29th April last, calling for the submission of a report with the available statistics regarding the area of paddy cultivation in the villages below the head waters of springs, &c., I have the honor to state that it will be seen from the enclosed statement showing the extent of lands under wet cultivation during the past 15 years in the several taluks of the district, that there has been a considerable increase in the area under wet cultivation during those years, notwithstanding that large areas have been brought under coffee and cardamom cultivation. The paddy cultivation in the malnad does not mainly depend on these streams but depends also on rainfall, of which the want is never complained. On the other hand trenches are generally excavated in paddy fields in the malnad parts for draining off the superfluous supply of rain water. I herewith submit a copy of the rainfall register obtained from Mr. Robert Anderson and this clearly shows that at Dargai only two miles from Saklespur there has not been any diminution in rainfall for the last 30 years.

2. In the maidan taluks also there has been a gradual increase in wet cultivation under channels fed by rivers taking rise in the malnad. It may, therefore, be safely asserted that the removal of trees for coffee and cardamom cultivation has not injuriously affected the rainfall in the malnad. It is also a well known fact that as coffee does not thrive except under shade, large number of suitable shade trees are annually planted.

Statement showing the wet lands irrigated in the Hassan District during the year 1882-83 to 1896-97.

Arkalgud included.

And (2) The Deputy Commissioner, Kadur district, No. 2, dated 1st July 1897.

In reply to Government Order No. 9591-92—R. F. 34-96, dated 29th April last, and subsequent docket No. 11470-1—R. 3809, dated 28th ultimo, calling for a detailed report with available statistics, &c., *in re* the area of paddy cultivation in the district, I have the honor to submit the accompanying statement showing the area under wet cultivation from 1882-83 (since which period there have been no territorial changes in the district as a whole) up to 1895-96, both years inclusive, from which it will be observed that in every taluk wet cultivation has gradually and considerably increased.

2. The Amildars, to whom detailed instructions had been issued on the subject, state that wet cultivation has nowhere diminished owing to the clearances for coffee or other cultivation and that on the contrary, it has augmented from year to year as is borne out by the talukwar statistics which at a glance will show that an area of nearly 16,500 additional acres has been brought under cultivation since 1882-83.

3. The reports received from Amildars are herewith forwarded in original with *ferist* for reference.

Statement showing the area under wet cultivation in the Kadur district from 1882-83 to 1895-96, both years inclusive:—
